Alice Tully Hall
Lincoln Center for the Performing Arts
New York, NY, USA

More than a thousand sheets of Moabi wood veneer surround the hall in columns as high as 48 feet. Soft contours and tight reveals support the one-piece illusion created.

All of the Moabi veneer used in the Alice Tully Hall was sliced from a single log, originating in Africa, and manufactured with the same precise techniques used to produce SanFoot® Natural Wood Veneer Wallcovering. Using the ultra-thin slicing method assured the distinct color and figure of the Moabi would remain consistant from one sheet to the next – the maximum use from a sustainable resource.

SanFoot products offer one of the largest sequenced and consistent runs in a natural wood wallcovering available today.

Environment Friendly®

SANFOOT® FineTec® *These wallcovering sheets are made from real wood veneer, naturally and artificially colored, to simulate some of the most exotic veneer figures in the world. Most FineTec "species" are reconstructed veneers (Recon), utilizing abundantly-available trees to imitate their namesakes. However, Gumdrop and Licorice are unlike anything you will find in nature. FineTec is a custom-order product. Please contact your distributor for availability, samples and pricing.*

SANFOOT® *300% more yield per log saves trees...*

Environmentally-conscious selection of species and individual trees, combined with patented slicing methods, results in a 300% more yield manufacturing SanFoot when compared with conventional veneer production. Great care is used when selecting logs that have been evaluated for the greatest yield of consistent, high-quality veneer. The SanFoot concern for the environment extends to tested compliance with fire hazard protection and VOC emission requirements.

SANFOOT® *Finish Options*

Standard and Elite Finish *Unless specified otherwise, SanFoot sheets are supplied prefinished with one seal coat and one urethane topcoat. Increased durability is available by specifying our exclusive Elite Finish Multiple Application Top Coat available in 30% or 70% sheen.*

Custom Stain *SanFoot products can be custom-stained to alter the natural appearnace of the wood species. This finish technique can be used to create unique effects by complimenting existing tonal variations.*

Custom Inlays and Digital Imprints *Laser-cut inlays are the result of removing the base layer and replacing it with one or more contrasting layers. Digital imprints are designs applied directly to the surface of the SanFoot sheet which is then coated with a resilient protective finish. Please contact your SanFoot Distributor for more information about custom inlays and imprints.*

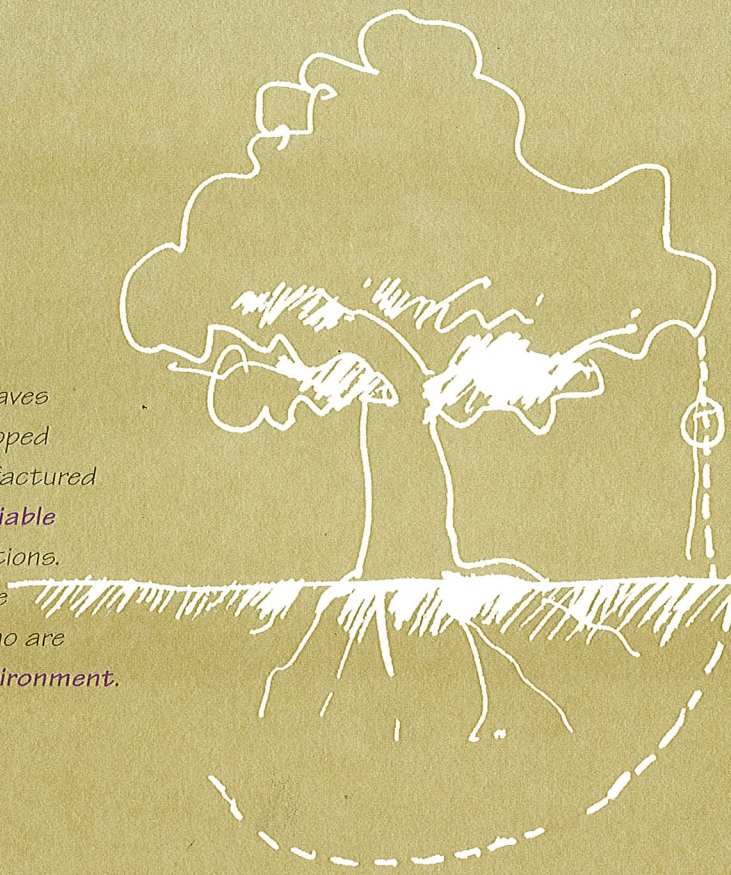

SANFOOT RealTec® Anigre, QC

SanFoot's versatility allows the freedom to design environments with familiar materials used in unique and unexpected applications.

Environment Friendly®

300% more yield per log saves trees. SanFoot® was developed and continues to be manufactured with the goal to **assure reliable supplies** for future generations. We continue to support the efforts of organizations who are working to **protect the environment.**

Forest Management™
Lands managed for responsible tree harvesting

Selected Trees™
Select old-growth trees removed to maintain forest health

Plantation Grown™
Specific species of trees grown for lumber and veneer production

Enhanced Species™
Veneer from abundant species are physically altered or reconstructed to mimic an exotic species or create a unique appearance

SanFoot versatile and custom features include:

Architectural-Grade Veneers appropriate for all interiors

Domestic and Exotic Natural Wood Species from around the world

Cost Effective substantial savings when compared to architectural panels

Easily Installed by wallcovering professionals with standard wallcovering tools

Unique Patented Composition multi-ply construction for extreme stability and flexibility under the most demanding conditions

Environmentally Stable virtually unaffected by fluctuating humidity and temperatures

Flexible for Radius Applications conforms to right angle corners and small radii

Standard Supplied as Prefinished with 30% urethane sheen

Custom Finish Options including Elite 30% and 70% sheen

Custom Stain matched to your color

Custom Graphic Enhancements including digital imaging and multi-species inlays

Variety of Sequence-Matched Standard Sheet Sizes and custom cutting to specification
