Class A Flame Treatment

Our products come standard as a 'Class C' material. Some commercial projects require 'Class A' materials in certain areas. Should you be working on a project that requires 'Class A', please let us know. Upon request, and with the addition of a small up charge, all of our products can be 'Class A' treated for flame spread.

- 'Class A' must be called out on your purchase order.
- 'Class A' does not mean fire proof. It does mean that the spread of flames will be measurably slower than a 'Class C' combustible surface.
- We are certified 'Class A' applicators.
- Adding 'Class A' treatment to our product will not noticeably change the color or texture of our wood products.

Please don't hesitate to reach out if you have any questions related to 'Class A'.
