PROJECT CALCULATOR

To calculate how many tiles you will need, find the square footage of your room by multiplying the length by the width and then dividing by 4 which is the sq. ft. of the tile. You will need to add 15 % waste for cuts.

Length

Width

Square footage of your room

Install Glue-Up Tiles

with Ease

Faux Metal / PVC Ceiling Tiles Glue-Up

Step 1

Layout the Tiles

Two Edged Tiles : Measure out from each end of the wall a distance equal to the width of the perimeter tiles and using a chalk line, strike a starting line. This is necessary since most walls are not perfectly straight. Align the edges of the perimeter tiles with this line, beginning in one corner of the room.

Four Edged Tiles: To find the center of the room you would measure all four walls, find the center of all four walls and then connect two opposite facing walls with a chalk line.

Step 3

Cut the tiles Using Scissors

Faux metal ceiling tiles look very realistic. However, they can be easily cut by first drawing a line on the back then using a pair of large scissors. They can also be cut using a multi-tool fitted with a fine-tooth blade.

Glue Tiles in Place Using a High-Tack Adhesive (Instant Grab 310)

These decorative ceiling tiles are very lightweight and are put up with a high-tack, water based adhesive that immediately holds the tile in contact with the ceiling while, at the same time, allowing it to be slid sideways for alignment and positioning. No tape is necessary.

Step 5

Cut Out Tiles for Fixtures & Ducts

Openings for electrical boxes and heating/cooling ducts can be cut using either scissors or a utility knife. The video demonstrates how to locate the proper position for these openings.

Don't forget to purchase the right adhesive!

Step 2

Create a Start Line

Step 4

Glue Tiles in Place

Install Drop-In Tiles

with Ease

Faux Metal / PVC Ceiling Tiles Drop-In

Step 1

Installing Full Tiles

You will not need to find the center of the room when you are installing faux tin drop in ceiling tiles if you have an existing grid system. Simply install the first tile by pushing the ends into the creases of the existing grid system. Take care not to push too hard on the tile, but just gently enough to insert it over the existing tile. Repeat the same process described until you have completed all of the whole tiles and are left with the edges.

Cutting a filler tile F7

Step 2

Ways to Finish the Edges

Use a filler tile. This is so you do not cut the original tile's design. A filler tile will fall nicely into all four sides.

Cut the original tile. The 'cut-to-fit' faux tin drop in ceiling tiles may need an adhesive to hold them tightly in place. This is because they will not be held from all four corners into the existing grid system. However, if you are able to cut the tiles to ensure a tight fit between the wall, then you may just dispense the adhesive. If you are planning on installing crown molding that will help keep the cut in place.

Adding a grid cover

Step 3

Ways to Color Match your Grid

Paint your grid to match. If you are going to paint your grid, do so before installing the tiles to avoid getting paint on them. Go to your local paint store and have them scan the tile to find a match.

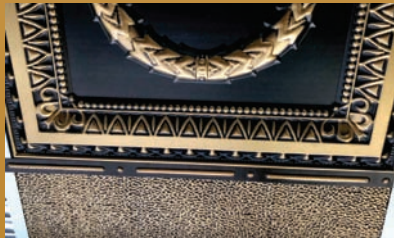

Do the same for your A/C vents and light covers etc.

Use grid covers. For most of our tiles we offer grid covers to match. We offer peel and stick or snap on grid covers in matching colors. Make sure to clean your grid with alcohol if you are using peel and stick covers.

Finish with crown molding

PROJECT CALCULATOR

To calculate how many moldings you need, find the linear footage of your room by adding all sides of the room where the crown molding is to be installed. Then divide that number by 8 which is the length of the molding. Lastly, add waste which is 20% to allow for cuts and use of short pieces.

Install Crown Molding

with Ease

 **YouTube** To find this video, visit decorativeceilingtiles.net
Click on How-To , By Material, then Install Crown Molding

Step 1 Ordering your Molding

No trip to the home improvement center or lumber yard necessary. The molding I used for this project arrived in a single carton. The sections were eight feet long and, quite literally, light as a feather.

Cutting your Molding Step 2

A standard miter saw slices through this material in a flash. The molding can be cut in the vertical position with a 45-degree miter setting or in the horizontal position using a bevel cut.

Step 3 No Nails Install

Look, No Nails. No fasteners of any kind are needed. Instead, the molding is secured in place with Akfix 310 Instant Grab that's applied in beads to the back of the material. Hand pressure is all that's needed to bond the trim to the wall. This is especially helpful when having to install the crown behind built-in cabinets that cannot be moved.

One Person Job Step 4

Working Alone? No Problem. Because the sections are a manageable eight feet in length and so lightweight, it's simple to work solo. An entire room can be completed in just a couple of hours. Creative Crown also makes molding that works equally well on cathedral or vaulted ceilings.

Step 3 Painting

Smooth Finish. Crisp Profiles.

This new generation polystyrene is glass smooth. Right out of the box it can be painted with one coat. Painting can be done after installation by masking the walls and ceiling, but I found it simpler to paint beforehand. The traditional crown details are sharp and clean. Waterbased paint must be used.

Don't forget to purchase the right adhesive!

Alejandra Ramos
Project Consultant

Products are wonderful

"I have ordered many ceiling tiles for several rooms and I absolutely love them. I also bought the crown moldings and they look elegant. The company is tops and the shipping time is great. This is a reliable and wonderful company to work with. I would give it 10 stars and highly recommend shopping with them and you will expect your items to be pack."

-Denise B. Verified Buyer

Decorative Ceiling Tiles are the only company I'll buy from!

"They have amazing customer service and have always delivered wonderful quality tins. I use them for artwork and custom frame them. I've become obsessed with this new hobby. Thank you for everything DCTiles."
