travertine

phenomenal proportions... monumental design.

With varying degrees of sand and cream, the Canyon Collection's grandiose shifts signify a deep understanding of the world's wonders. Its dramatic blends of travertine resemble the seasonal changes of the greatest of the earth's phenomenons.

In Rome architects and engineers selected Basalto to create the Theatre and pave the streets.

They prized the rich range of charcoal grey to black colorization of this unique material along with its incredible density. Basalto is found on the terrestrial planets (those closest to the sun) of Earth, Mercury, Venus and Mars! Our unique symphony of Basalto is offered in three irresistible finishes; honed, chiseled and bush hammered. There are a variety of field and mosaic blend options to choose from; elongated hexagons to a multi finish staggered.

Today, Chelsea is characterized as one of the most eclectic and stylish neighborhoods in New York City. Past and present, its renaissance has been distinguished by incredible Architecture, famous resident Artists, along with notable Restaurants and Gallery's that are unabashedly individualistic.
The diversity of our Chelsea Brick Collection will appeal to anyone's innate desire to express themselves personally; over 20 artisanal glazes available in Rustic, Plain or Strided profiles. Made in the USA artisanal hand glazed bricks.

cassis liner blend mosaic

Stone and glass in combination is an ancient architectural feature. In the technology of today, stone and glass mosaics reach new heights with the Sorbetto Stone & Glass Mosaics Collection. The glass elements are visually cool and the stone elements somewhat more warming. A lucid and luxurious material for any backsplash or wall.

color variation

V I - Minimum Color Variation - Fairly uniform background color, very minimal veining.
V II - Moderate Color Variation - Background color has some variation and slightly more pronounced veining.
V III - Extreme Color Variation - Stones in this group have extreme variation in color as well as veining. Blending on the job is required.

NOTE - Natural stones are products of nature, and no two pieces are exactly alike.
These codes are intended as a general guide to how much variation in color, movement, and veining can be expected.
* All natural stones have unique natural variations and inclusions that are impossible to show in a photograph or sample. For this reason, all stone should be unpacked and inspected prior to installation, as Trinity Tile cannot accept claims for variation in any stone after install.

durability

A - Light Traffic - These stones are suitable for most interior residential use with the exception of steam showers. They are not generally recommended for commercial paving applications, but are appropriate for very light use commercial interior vertical applications.
B - Medium Traffic - These stones are intended for use in all interior residential applications, including countertops**, patio areas*, and flooring. These stones are also appropriate for many commercial applications such as light traffic*** interior flooring and exterior* and interior vertical applications.
C - Heavy Traffic - These stones are extremely hard, making them suitable for all light and medium duty applications as well as most interior and exterior* commercial applications. Recommended uses include heavy traffic*** residential and commercial flooring and other areas that require maximum durability.

NOTE - * Some Medium and Heavy Duty stones cannot be used in exterior applications in areas that experience freeze/thaw conditions. Please use specific stone in the Usage Guide for this information. ** Some Medium Duty stones may be subject to scratching or etching when used as countertops. *** Light, Medium and Heavy Traffic refer to pedestrian traffic only. If the stone is to be installed in an area with vehicular traffic, please contact a sales representative to inquire about thickness and installation requirements.

stone care

The Importance of Cleaning

The secret to beautiful marble is merely keeping it clean. The cleaning and care of natural stone is different than that of ceramic or porcelain. Proper care of this porous material will allow for durability and beauty year after year. The daily removal of ordinary dirt and soil is a necessary step in caring for natural stone. Sweeping compounds containing oil must never be used on natural stone because they will eventually discolor the surface. Cleaners containing acid or bleach will scratch the surface and ruin natural stone; therefore neutral cleaners should be used. If a floor is heavily trafficked, it should be cleaned daily and rinsed with clean water until all traces of dirt solution are removed. The natural stone should then be allowed to dry.

Complicated cleaning agents and maintenance procedures will never be needed if the marble surfaces are regularly cleaned. When natural stone is neglected, dirt and grease are allowed to accumulate; therefore the surface can be damaged almost beyond repair, and cracks can be caused by general deterioration. Improper cleaning materials such as those containing alkali, acid, metallic salts or other strong ingredients actually attach the natural stone itself and increase and enlarge dirt catching pores. Soap or abrasive type cleaners should never be used on marble surfaces. This type of cleaner reacts with the natural stone compound to build a soapy scum which destroys the beauty of natural stone and forMS a greasy or slippery film that will catch or hold dirt. The use of an abrasive cleaner will result in unsightly scratches on the surface. Abrasive cleaners are almost impossible to remove by rinsing and normal foot traffic will grind the left over abrasive particles into the surface, thus ruining the floor. The ideal cleaner should be, first of all, effective in removing soil. Secondly, it should not develop any damaging discoloration or surface film. It should be able to be rinsed free even in hard water.

Natural Stone Maintenance Procedures

The care and cleaning of natural stone is quite simple. If the proper procedures are followed, products will maintain their innate beauty and durability for a lifetime. To ensure the best service from natural stone, clean the product thoroughly after installation, and follow up with a regular maintenance program. Immediately after completing installation, wash the floor clean of loose debris, dirt and foreign material. Use clean, soft cloths, sponges or mops and fresh warm water. Allow to dry. A second rinse application may be required to remove any additional film. Apply a thin even coat of sealer and allow it to dry for 3-5 minutes, removing excess sealer before it dries. If too much sealer is applied, it may be removed by re-applying the sealer to re-activate residue. Make sure to buff it off before it dries. Within 3-5 hours, the finished area can be used for normal foot traffic but must be kept dry and free of staining agents for 72 hours. It is strongly recommended that the aforementioned procedures be completed immediately after installation and repeated in a regular maintenance program.

Natural Stone Maintenance Products

There are many natural stone maintenance products on the market that can be found in local home improvement stores, floor covering dealer showrooMS, and online. Only cleaners designated for natural stone should be used. Products available for natural stone maintenance range from every day cleaning to heavy-duty cleaning and anything in between. Deep cleaners are used for heavy-duty cleaning. These products penetrate the stone to get any unwanted dirt or residue out without damaging it. Other products available include stain removers, etch removers, grout cleaners, polishes and color enhancers. Products may vary by manufacturer.

Natural Stone Sealers

All natural stone should be sealed prior to installation, as well as incorporated into your maintenance plan. Because natural stone is porous, it is necessary to use a penetrating sealer. Such penetrating products fill the pits and voids and actually become an integral part of the floor itself. The primary purpose of sealing is to provide protection to the natural stone. Ordinary dirt and soil are sealed out of the floor as if all pits and voids have been filled and sealed. They are held on the surface where they can easily be removed. Natural stone floors properly sealed and finished are easy to clean and maintain. Marble floor should not be sealed until the surface is thoroughly cleaned and dried.
After installation, the entire application (grout included) should be sealed again, thus protecting both the stone and grout from color damage. Depending on the sealer, location and use, the frequency with which an area should be sealed may vary. It is very important to seal your natural stone to protect against dirt penetration and stains.

There are many different sealers available on the market. Penetrating/impregnating sealers are generally used on all natural stone; however, stone enhancers can be used if a richer color is preferred. Consult your manufacturer for specific product information and instructions.

Natural Stone beauty is the result of inherent and unique characteristics of color, shade, texture and veining.
To appreciate your selection:

- Always view stone as a family/ range of color that can vary within a tile or from tile to tile.
- Blending / mixing the tiles and laying them out prior to installation is recommended.
- The natural stone coloration can be natural or may be enhanced by applying a stone enhancer to simulate the effect, wet the stone surface with water.

Note: Enhancing must be done before sealing the stone.

- To avoid staining, the stone should be minimally sealed with a stone sealer.
- Consult your sales associate, contractor or our Web site for additional information on the products.
