

ANTHOLOGY WOODS SUSTAINABILITY

Sustainability is a vital part of our ethos.
We are proud to provide FSC® certified &
sustainably-sourced wood to support your
green building project.

BENEFITS OF RECLAIMED WOOD

Improved Indoor Air Quality

Recycled & Natural Material

Long Lasting & Durable

Recyclable End of Life Status

Biophilic Effects

Low & No VOC

CERTIFICATIONS + PRACTICES

The Forest Stewardship Council® (FSC®) states that their mission is to support “environmentally sound, socially beneficial and economically prosperous management of the world's forests.” They not only uphold criteria that deters from the over harvesting of trees for lumber, but they also integrate social and community-driven principles to promote long-term management of forests and the people who interact with them.

Most of our Anthology Woods solid products are FSC® Certified Post Consumer Recycled or FSC Mixed Credit, and engineered products are available on new-wood FSC substrates by request for LEED (Leadership in Energy + Environmental Design) needs.

REGISTRATION CODE: SA-COC-002372 – 79; SA-CW-002372

LICENSE CODE: FSC-C041262

ISSUED BY: Soil Association Certification Limited Spear House, 51 Victoria Street Bristol, BS1 6AD United Kingdom

Anthology Woods has [published a Declare Label](#) for our Reclaimed Solid Wood Flooring & Paneling, with Unfinished, Oil Finish & Low-VOC Poly Finish. Our products do not contain any of the Red-List chemicals, ensuring that our wood flooring & paneling promotes healthy indoor air quality and does not contain harmful chemicals or substances.

Declare labels are useful tools for many green building initiatives, including the Living Building Challenge 4.0, LEED V4 and V4.1 and WELL Building Standard. For LEED, the Declare Label Red List Free and Red List Approved products work specifically with the Building Product Disclosure and Optimization Credit, Option 1 and 2.

Health Product Declarations (HPDs) are an important tool for designers and architects to specify building materials and products that are eco-friendly and low-emitting for LEED and other green building projects. HPDs were created to increase transparency and to disclosing the human and environmental health impacts of the ingredients and materials.

Anthology Woods has published HPDs for the following reclaimed wood products: [Frontier Blend: Antique and Weathered](#), [Stout's Legacy: Weathered, Antique & Reborn](#), [Industrial Oak](#) and [Grey Medley Oak](#). All of these products are unfinished, untreated wood, which is a natural biological material perfect for LEED, WELL and other green building initiatives. All of these products have been pre-checked for LEED Option One and Two and passed both options.

We are proud to offer products that are made and manufactured here in the USA. We partner with local companies to sources and manufacture our products, striving to reduce our carbon footprint and environmental impact while supporting American workers.

[Mindful Materials](#) is a free platform providing transparency information regarding human health and environmental impacts for manufactured products. Anthology Woods is proud to list many of our products on the database to improve transparency and ingredient information availability.

We use eco-friendly finishes for our wood products, including natural oils and polyurethane finishes that are low- or zero-VOC, ensuring that our products add to healthy indoor air quality. Any paints we use are lead-free, and non-toxic for both our staff and our customers.

Additional Sustainability Practices

Robust recycling practices at our offices and manufacturing facilities

Recycling our wood waste for biomass energy production

Recycling our sawdust to community members for compost/mulch

Partnering with various outsource partners and sourcing practices to minimize our shipping/carbon footprint.

Limiting the amount of non-recyclable and plastic materials in our packaging

Our product is full recoverable/recyclable at the end of its life span

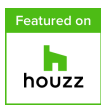

THE SUSTAINABLE INVESTMENT

When you invest in reclaimed, recovered, and responsibly-sourced new wood, you are choosing a sustainable, quality product with enduring beauty. Reclaimed wood involves investing in the meticulous care in deconstruction, combining similar sources, de-metalling, sorting for character, trimming for quality and filling holes where appropriate.

Because of the smaller and often random dimensions of the starting product when milling reclaimed wood, the yields are not as high as the first time around. Bringing you a superior product with a distinct look and rich story is well worth the extra work to us. We appreciate your interest in our sustainable, quality products.
