

CARE AND MAINTENANCE GUIDELINES

SUMMARY OF MATERIAL

With a carefully chosen mix of pre- and post-consumer recycled glass, GEOS Surfaces are a unique surface of superior strength and remarkable beauty. It is a non-porous, durable material that performs, fabricates, and installs like engineered stone. Combined with proprietary resin binders, GEOS Recycled Glass surfaces do not require sealing. GEOS is available in a wide range of colors and is suitable for both commercial and residential applications.

CLEANING PROCESS

GEOS Recycled Glass Surfaces are easy to maintain and keep clean. For daily care we recommend wiping the surface with a damp soft cloth.

To remove surface debris, use a soft cloth and mild cleaner. Cleaning products should be free of chlorine bleach, ammonia, citric acid or other acids. Never use bleach, oven cleaners, Comet®, Soft Scrub®, SOS®, Lime Away®, products with pumice, paint removers, furniture strippers, citrus based cleaners, tarnish or silver cleaners, as these contain harsh chemicals and/or abrasives that can damage the surface.

For items that have adhered themselves to the surface, such as mustard, gum, etc. use a razor blade at a 45-degree angle to the surface and scrape with light pressure to loosen the item. Remove remaining residue with a soft cloth and cleaner.

GEOS Recycled Glass Surfaces are non-porous so there is no need to seal or wax your tops. We do recommend however that spills be wiped up as soon as possible. Spills or cleaning products containing high acidity (such as lemons or vinegar) if left for a prolonged period or applied routinely may cause damage to our colors containing natural sea shells.

APPROVED CLEANING AGENTS

Products free of the following:

- Chlorine bleach

- Ammonia

- Citric acids or other acids
