*The earth has music for those who listen. The proximity of nature and experiencing its harmonious beauty with all senses is one of the deepest-rooted sources of pleasure. This experience cannot be replaced, but it can be enhanced. The warm and personal atmosphere of meetings in the garden or on the terrace is guaranteed by furniture made of natural materials, characterized by a subtle, balanced design.*

*Relying on our almost 140 years of experience in furniture production, we are happy to present you with the catalog of our new brand. Paged Garden was created so that long-lasting furniture made by hand and with craft precision can enjoy you also outside the walls of your homes.*

Nature is beautiful in its unpredictability. That is why we have created **WRB** technology so that you can fully enjoy high-class furniture without worrying about the harmful effects of weather conditions.

**WRB** (Weather-Resistant Beech) protects wood against discoloration, splitting, moisture or drying as well as mechanical damage. A standard chair, taken outside, is not able to maintain its quality, being exposed to UV radiation, high temperatures or humidity (including rainfall). The problem for it may also be functioning in coastal areas, where salt, contained in the air, can lead to a violation of the outer coating and corrosion at the interface of metal and wood. **WRB** allows to give furniture exceptional durability and longevity.

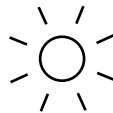

#### RESISTANCE TO MOISTURE AND TEMPERATURE

tests in the ARALAB  
climate cabin Sherwin-  
Williams laboratory in  
Marsta (Sweden)

#### RESISTANCE TO SUNLIGHT

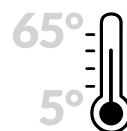

UV paint coating tests  
performed according to ISO  
11507: 2007

ISO 11507:2007

#### RESISTANCE TO SALINITY

tests in the chamber for  
cyclic corrosion tests, made  
according  
to ISO 9227: 2012

WRB Technology keeps  
furniture safe from deformation  
in 5–65°C temperature range.

## HOW TO CARE FOR **WRB** FURNITURE

*Furniture made using WRB technology is manufactured from solid wood permeated with an impregnating agent. The impregnating agent penetrates deep into the pores of the wood and fills them, enriching and stabilising the structure of the wood and making the furniture suitable for outdoor use. When applied, the impregnating agent accentuates the natural beauty and structure of the wood. For this reason, certain inherent, natural features of the wood, such as knots and medullary rays, may be visible either in individual components in an item of furniture, as well as, in individual items of furniture. This makes each product unique in appearance.*

*Maintenance of furniture made using WRB technology should be carried out at least once every 9 months, in accordance with the instructions attached to the preservative.*

*Only the preserving agent recommended by the furniture manufacturer should be used for treating the wood.*

*Furniture intended for the preservation process should be clean and dry.*

*Before commencing the preservation process, remove any smudges.*

*Apply the preservative evenly to the cleaned surface and leave it for several minutes.*

*Remove any excess using a piece of cloth — let the furniture dry for 2 hours.*

*For better results, it is recommended to repeat the maintenance process.*

*GARDEN furniture is manufactured largely by hand, by qualified craftsmen with extensive experience in woodworking. Thanks to this, each of the models leaving our factory is unique in its own way and marked by the personality of its creator. It also allows for precise machining of details and giving the product the highest quality, impossible to obtain in automated mass production.*

*There is only one environment. The ecosystem that supplies us is the same environment in which we and our clients live and operate. We have been minimizing environmental losses and balancing acquired resources for almost 140 years. We treat the environment as a whole and we take care of it in a number of ways simultaneously. Thus, we create an efficient, autopoietic system of interaction with the*

*environment. We obtain wood and other materials for production such as plywood or fabrics only from our certified sources. The suppliers are to acquire wood from specially selected batches marked with the FSC® mark (Forest Stewardship Council), whereas the upholstery materials have to meet OEKO-TEX standards.*
