

Weather doesn't matter. Discover WRB technology

Available on selected Beech wood
chairs from Poland only.

Temperature

WRB Technology keeps
furniture safe from
deformation in 41°F - 149°F
temperature range.

Precipitation

WRB Technology isolates the inner
structure of wood from water, even
if the external coating is wet or
exposed to rain.

Sunlight

Exposure to sun and UV
radiation doesn't change the
color of furniture protected
by WRB Technology.

Air humidity

WRB ideally protects the wood
structure against absorbing the
moisture and prevents the wood as
well as the coating from bulges.

WRB[©]

CORTE family.

Weather Resistant Beech. Available in 'Meble' wood stains.

Bad weather conditions can be devastating for wooden furniture. There is one exception to this rule - this does not apply to products protected by WRB technology. A special formula based on natural ingredients neutralizes the effects of most weather conditions effectively. WRB coated chairs, bar stools and tables made of beech wood are very well protected. WRB protects furniture against humidity, discoloration, splitting or drying as well as mechanical damage. A standard chair put outside will not preserve its quality.

The great advantage of WRB is the possibility of applying it on most non-upholstered beech furniture in our offer. There are many different styles and several hundred models to choose from. These are the same models that are placed inside the restaurants, hotels, clubs and conference rooms around the world. The use of WRB does not change the design of the furniture, comparing to the piece without such coating.
